 - summary: Invasive Ductal Carcinoma | Grade 2 | tumor size 1.00 cm | PT3 ANI
 - logic evidence: Two lymph nodes are examined in their entirety at multiple levels. The smaller contains a13 with minimal extra-capsular extension, r mm metastasis B. The previously biopsied large tumv, lobular carcinoma, is an infiltrating main tumor In one 2 mm. area (block #6 within the), there is a focus of invasive ductal carcinoma which is nuclear grade 1 (architectural score 1, nuclear score 2, mitotic score 1). In addition, in blocks 4 and 5 there is in situ tumor which, with the help of E-Cadherin stain, proves to be ductal carcinoma in situ, nuclear grade 2. Please see the template below.
 - primary diagnosis: Right breast tissue, excision - lobularcarcinoma._n Breast tissue with biopsy site changes, situ, ductal carcinoma in situ and invasive ductal carcinoma, SBR grade 2. (Leftlbreast, mastectomy -Large (5.5 cm.) infiltrating lobular carcinoma, minor associated component of invasive ductal carcinoma. The invasive ductal carcinoma and ductal carcinoma in situ areless than 1 mm. Hormonereceptor studies cannot accurately be performed on the invasive ductal carcinoma.
